Hitachi glow plug controllers – Simply better!

Hitachi Astemo contributes to a sustainable society and improved quality of life by providing world-leading advanced mobility solutions that satisfy our customers. Also within the Independent Aftermarket we make a significant contribution by continuously improving existing products with modern technology.

Within the product group of glow plug controllers we today offer the most comprehensive range available – covering more than 95% of applicable vehicles in the core European countries. Additionally we've gone one step further and offer unique service solutions such as our glow plug service kits (controllers and glow plugs as a set) as well as spark plug and glow plug greases.

In Hitachi Astemo's internal development and test centre in Espelkamp, Germany the development team analyses various products, responds to customer needs and creates products with added value in its own production.

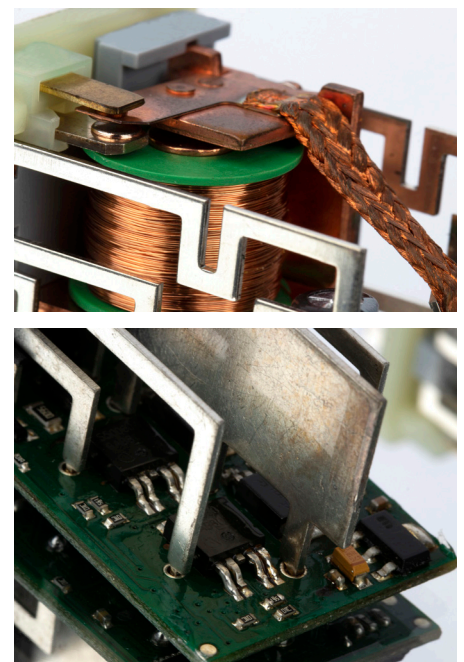

The Hitachi Aftermarket range offers three different product types: Analogue glow plug controllers, digital glow plug controllers and fully electronic control units. In the modern types, the glow plug control is taken over by the engine control and communication often occurs via a bus system.

Benchmark between Hitachi part 2502183 with the OE product

Instead of a conventional relay Hitachi Astemo uses modern, intelligent semiconductors with extensive protective functions; a relay has a significantly shorter service life because it is a mechanical component (failure e.g. due to contact burnout, risk of „contact sticking“) and also has no internal protective functions.

It is yet again another example of how we have committed ourselves to offer our customers what they expect from us – the best!

- **95% vehicle coverage in Europe**
- **Service kits**
- **Glow plug greases**
